The launch of the report “Immersive history education – where are we and what’s ahead” in San Francisco is behind us

The launch of the report “Immersive history education – where are we and what’s ahead” in San Francisco is behind us

The New Technology Division of the Institute of National Remembrance (IPN) participated in this year’s Game Developers Conference (GDC). On March 19, during the event, the latest report titled *“Immersive History education – where we are and what’s ahead”* was presented. The publication highlights the importance of ongoing changes in education and encourages modifications in teaching methods through the use of new technologies. The full report is available for free on our website under the Research Reports section.

The New Technology Division of IPN at the Game Developers Conference in San Francisco

The New Technology Division of the Institute of National Remembrance took part in one of the most prestigious events in the gaming and educational industries – the Game Developers Conference in San Francisco. Our participation provided an opportunity to reach an international audience and promote not only the latest research report but also the activities of the entire Institute of National Remembrance.

The Game Developers Conference is an event that annually gathers thousands of participants, including programmers, artists, designers, producers, researchers, educators, and representatives of educational institutions. GDC serves as a platform not only for technological premieres but also for the exchange of knowledge and inspiration.

The Polish national zone at the event was organized by the Polish Agency for Enterprise Development (PARP) and the Polish Trade Office in Houston. It hosted meetings, presentations of promotional, gaming, and research materials. Through our booth, Polish exhibitors had the chance to interact with their audience in person, get to know them better, and present their diverse portfolios directly. The booth was part of the Creative Sector Promotion Program implemented by PARP.

“Immersive history education – where we are and what lies ahead" at the Game Developers Conference

The report presented by the New Technology Division of IPN at GDC is an important contribution to the discussion about the future of education. Its international premiere allowed the report to reach a wide global audience. All GDC participants interested in modern education and the development of teaching methods could learn about ways to leverage technology in education and receive information about effective educational tools that engage learners and transform the perception of learning.

The report’s presentation at GDC also serves as inspiration for game and app developers to create educational content. New educational games, applications, and programs incorporating modern solutions offer potential for more effectively reaching school-aged youth, who might otherwise seem reluctant to engage with historical knowledge.

The global scope of the New Technology Division’s Activities

The New Technology Division of IPN’s international efforts in modern education increase interest in Polish history across generations worldwide. Events such as the launch of the educational adventure game *“Aviators”* at the Bett trade show in London, the game *“Warsaw Rising”* at Gamescom in Germany, or the premiere of the latest research report in the United

States demonstrate that historical education in Poland is not confined to local boundaries. The activities of the New Technology Division show that immersive historical education is an effective tool for sharing Poland’s experiences and history with nations across the globe.

Summary of the research report premiere

The report was premiered on March 19, 2025. The New Technology Division participated in the Game Developers Conference from March 19 to 22. During this time, new connections were established with leaders in the education and technology sectors, developers of educational tools, game developers, and researchers focused on modern teaching methods.

Participation in the conference and the presentation of the report and the portfolio of the New Technology Division allowed the Institute of National Remembrance to showcase itself as an institution drawing from Poland’s rich history while creating projects that transcend traditional educational frameworks.
