New Technology Zone in Jabłonna

To mark the 30th anniversary of the Primary School in Jabłonna being named after the Home Army (Armia Krajowa, AK), students have the opportunity to take part in a series of unique history lessons. As part of the anniversary celebrations, the Institute of National Remembrance's New Technology Division is organising a New Technology Zone at the school. These immersive history lessons are taking place on 4 and 5 November.

30 years of commemorating the Home Army

Three decades ago, the Primary School in Jabłonna was named after the Home Army, a formation that played a particularly important role in the history of the Polish Underground State and the struggle for independence during the Second World War. The anniversary provides an opportunity to recall the legacy of the school's patron, familiarise younger generations with the stories of Home Army soldiers, and highlight the importance of historical memory in shaping civic attitudes.

The inclusion of the IPN New Technology Zone in the celebrations makes it possible to complement traditional forms of education with solutions tailored to students' needs. As a result, exploring Poland's recent history becomes an opportunity for independent engagement, taking on challenges and actively participating in the historical events being presented.

Celebrating the anniversary at the IPN New Technology Zone

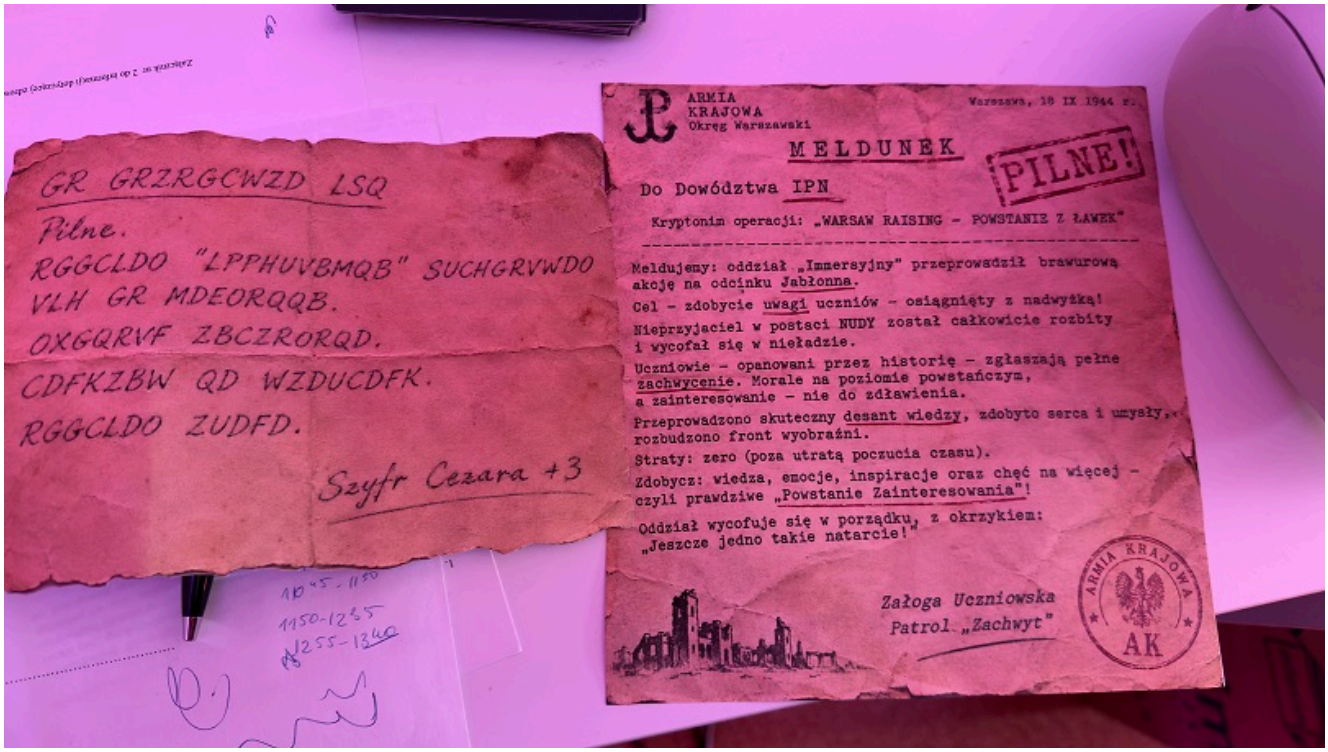

The New Technology Zone is a space where visitors can freely explore PC and VR stations, immersing themselves in the experiences offered by the featured productions. Here, students and teachers step into the roles of Polish heroes and, depending on the project, defend the skies over Europe or support the people fighting in the Warsaw Uprising.

As part of the anniversary celebrations in Jabłonna, students can explore all our educational projects and discover the many opportunities offered by modern history education. Digital environments allow them to view historical events from a different perspective and even step into the shoes of those who took part in them.

A Youth Dispatch to IPN Headquarters

During the event, the New Technology Zone welcomed female students who, as part of a theatrical performance, portrayed participants in the Warsaw Uprising. However, this was no ordinary visit: the guests delivered a special *Dispatch to IPN Headquarters*. It reported on the daring operation carried out by the "Immersive" unit, which successfully captured the students' attention and defeated its enemy – boredom. The operation was completed without casualties, with the sole exception of a temporary loss of all sense of time.

Our visit to the school was an exceptionally enjoyable experience. We were truly grateful for the commitment and enthusiasm shown by the entire school community. The students, in particular, impressed us with their active participation in the activities, genuine interest in discovering history and eagerness to take on new challenges. The event was further enriched by a variety of activities, including competitions, solving educational quizzes together, theatrical performances and the reading of the *Dispatch to IPN Headquarters*. We would like to thank the school for its warm welcome. It was a pleasure to be part of this special celebration.

A space for students and teachers

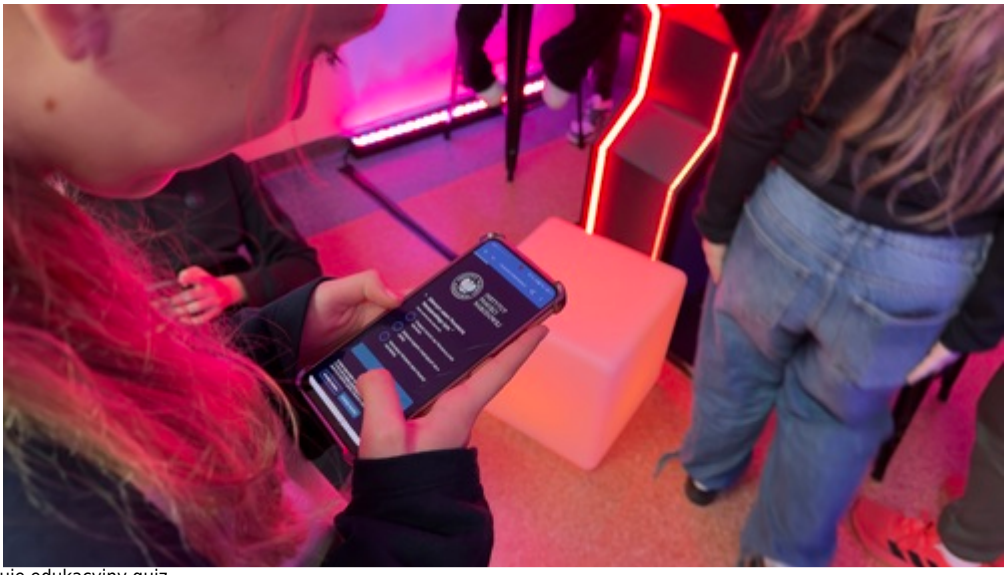

The school anniversary is not only an opportunity to reflect on the institution's history, but also a moment to consider how knowledge can best be passed on to future generations.

The New Technology Zone is a space designed for both students and teachers. For young visitors, it offers an opportunity to explore history through engaging experiences, games and modern technological solutions.

For teachers, it provides inspiration for enriching their lessons with innovative, proven educational tools that support their work and help spark students' interest. It is a place where technology becomes a bridge between generations, encouraging the shared discovery of Poland's history.
