The IPN New Technology Zone at SGH Warsaw School of Economics

The academic community of SGH Warsaw School of Economics had an opportunity to discover what learning through educational games and applications looks like. On 10 November, the IPN New Technology Zone was open to all visitors to SGH.

New opportunities for students and academic staff

The IPN New Technology Zone is a space where historical education meets modern technological solutions. Visitors were able to explore the concept of learning through games and applications by freely using computer workstations and virtual reality (VR) stations.

Students had the opportunity to explore history through hands-on experience, independent decision-making and interaction with digital environments. The New Technology Zone also offers an opportunity to develop digital skills and critical thinking, while discovering fascinating episodes from Poland’s recent history.

The experience gained in the New Technology Zone may also prove valuable in students’ future professional careers. Those who choose to pursue careers in education will gain a better understanding of the needs and learning habits of younger generations, while recognising the potential of modern tools in the teaching process. The projects developed by the IPN New Technology Division can serve as both an inspiration and a practical point of reference when exploring engaging ways to share knowledge and build meaningful connections with young audiences.

Academic staff, in turn, had an opportunity to explore solutions that can successfully complement traditional teaching methods. The projects presented in the Zone offer ready-to-use, innovative educational tools designed to engage students and support the delivery of classes in ways that respond to the needs of today's young people.

Discover the potential of modern historical education

A visit to the IPN New Technology Zone at SGH offered an opportunity to explore educational games and applications, which are increasingly becoming an important part of contemporary education.

The projects developed by the IPN New Technology Division demonstrate that modern technologies can be effective tools for popularising history and fostering historical awareness. These educational projects combine learning with entertainment, creating experiences that leave a lasting impression.
