

The Future History Mobile Stop visited Krosno

The largest city in the Podkarpackie Voivodeship, known as the City of Glass or Little Kraków – Krosno. From September 6th to 8th, immersive lessons from The Future History Mobile Stop took place here. The press conference on the first day featured Magdalena Hajduk, Director of the New Technology Division.

The second stop on the national tour

Starting Friday morning (September 6th), there were crowds gathering around the Mobile Stop. Young people and adults lined up to participate in modern historical education. Each visitor wanted to choose from the many attractions, but the most popular by far was the “Aviators” project – the latest from the New Technology Division. This project was especially exciting for young people interested in World War II and military history.

It’s also encouraging to see that adult guests, including teachers, educators, and history enthusiasts, can also benefit from the presented games and apps. These provide not only historical knowledge but also help develop digital skills and awareness of the latest teaching methods.

Press conference with Director Magdalena Hajduk

During the media briefing, the Director of the New Technology Division emphasized the accessibility of the games and applications presented in the Mobile Stop. All are available for free download from the Steam platform, and additional lesson plans have been created so that teachers and educators can conduct lessons based on the chosen project.

Next stop: Myślenice

The Future History Mobile Stop stayed in Krosno until September 8th. On September 9th, it will open its doors to visitors in Myślenice. Let’s not forget that entry to the Mobile “History of the Future” Stop is completely free. We warmly invite everyone!
